Software Engineer (B.Sc.) with full-stack, CI/CD, and systems-programming experience. Built production tooling at Trafikverket and Softhouse, and authored a multi-agent AI workflow for automated bug fixing as a bachelor thesis. Seeking roles in full-stack or software development.

Professional Experience

Softhouse

Karlskrona, Sweden

Software Developer Intern

Jan 2026 – May 2026

- Shipped features end-to-end across React, Express, Prisma, and MongoDB for TeamTemp, an employee survey platform, in an 11-person agile team.
- Identified and patched security vulnerabilities (server-side validation, input sanitisation); wrote Cypress E2E tests and integrated them into the Bitbucket CI/CD pipeline.
- Led customer demos and an internal office presentation; served as primary liaison between developers, customer, and management.

Trafikverket

Remote via BTH

Software Developer Intern

Jan 2025 – May 2025

- Built, with a team of six, a pipeline tool that detects vulnerabilities in third-party dependencies across multiple repositories.
- Refactored a legacy PowerShell script into a JavaScript-based Azure DevOps task that generates SBOM files in JSON format.
- Integrated automated security checks into CI/CD workflows to support vulnerability detection during builds.

Blekinge Institute of Technology

Karlskrona, Sweden

Teaching Assistant – C++

Sep 2024 – Jan 2025

- Mentored first-year students through lab supervision and 1-on-1 tutoring in pointers, memory management, and OOP.

Education

Blekinge Institute of Technology

Karlskrona, Sweden

B.Sc. Software Engineering

Aug 2023 – Jun 2026

Thesis with Iquest AB: ACID Bot – autonomous multi-agent AI workflow for bug-fix verification and PR creation. Key courses: Compiler Design, Operating Systems, Algorithms & Data Structures.

Newcastle University

Newcastle upon Tyne, UK

Exchange Semester – Computer Science

Sep 2025 – Jan 2026

Courses: Computer Vision & AI, Algorithm Design, Security Programming.

Projects

ACID Bot (JavaScript, Git, CI/CD, Multi-Agent Systems): Autonomous workflow that fetches bug tasks from ClickUp, fixes issues in external repos via controlled Git access, verifies correctness, and opens pull requests – with bounded retries per agent for cost and safety control.

Compiler from Scratch (C++): End-to-end compiler: lexer, parser, semantic analysis, CFG-based IR, three-address code generation, and a custom virtual machine.

ShowcaseSERL (Next.js, React, TypeScript, Tailwind CSS): Full-stack web app for showcasing student and researcher projects with dynamic listings, detail views, and a kiosk display mode.

Skills

Programming: C++, Java, Python, C#, JavaScript, TypeScript, SQL

Web & Frameworks: React, React Native/Expo, Next.js, SvelteKit, Express.js, Node.js, Prisma

DevOps & Data: Git, Azure DevOps, Bitbucket Pipelines, CI/CD, MySQL, MongoDB

Testing: Cypress (E2E), Jest, Bun Test

Spoken Languages: Swedish (Fluent), English (Fluent), Arabic (Native)

Awards

1st Place: Hollytech Hackathon – built a winning prototype in a competitive, time-constrained team event.
